
repeated for every held-out participant
Datasets
GRABMyo
(43, primary)
NinaPro DB5 (10)
Preprocessing
band-pass, notch,
250 ms windows,
10 features/channel
Outer split
leave one
participant out:
test p, train R_{-p}
Cross-fitted
attribution
5 participant-disjoint
inner folds of R_{-p}
Channel ranking
$Q_c(\lambda) = A_c - \lambda U_c$
Sparse retraining
top-k electrodes,
retrained on R_{-p}
Test on p
Macro-F1 per
participant and k
Prespecified
non-inferiority (H1)
$\delta = 0.02$,
cluster bootstrap
H2–H4
random subsets, λ,
deletion with
retraining
Exploratory
stability, sessions,
bipolar, replication
